

AIRJUMPER™ USER MANUAL

Issue date Feb. 2021

Congratulations on the recent purchase of the Australian made AirJumper™!

To use the device safely and ensure a long operational life, the following requirements must be followed as well as for warranty purposes as attached.

USER SAFETY

1. Site signage must be provided by the site owner with an example shown adjacent. This must be installed as close as practicable to the location of AirJumper™.
2. The surrounding area of the AirJumper™ must remain clear of any temporary or permanent obstructions as per the requirements of relevant design and planning codes for playground design. *Eg temporary site works.*

INSPECTION AND MAINTENANCE

AirJumpers are made from exceptionally durable materials which are designed to last in outdoor locations for many years without the need for maintenance. However, a minimum six-monthly inspection of the mat, springs and eyelets must occur to ensure the materials are performing to expectation and to check for any vandalism. The eyelets must be fitting snug with the rubber with no gaps (*as shown adjacent*). This inspection must be recorded including dated photos of the mat, springs and eyelets, and can be performed from above without having to remove the mat or use any tools.

Inspect the rubber mat for any signs of cuts or splitting. Also check for obstructions in the pit below the mat by making a visual assessment through the holes using a torch. A depth gauge is also to be used to ensure a minimum depth of 400mm from the underside of the mat to the bottom of the of the pit is maintained. If the depth is less, the mat should be removed, and the depth restored to ensure safe operation.

To remove the mat, lay a plank over the unit so no weight is applied to the mat and use the spring removal tool (*shown adjacent*) supplied starting with the corners first. If a replacement mat is being installed, ensure this is immediately available and replaced at the same time, or securely cordon off the area whilst the unit has no mat in place.

If the unit shows any undue signs of wear and tear or damage, please report using the contact details adjacent.

All inspection and maintenance to be in accordance with AS4685:2014, AS4685:2017 or EN1176:2017 or relevant local industry standards and / or codes.

BOUNCE FACILITY

Conditions of use

- 01 WHEELCHAIR USERS MUST BE ACCOMPANIED BY AN ADULT ASSISTANT
- 02 NOT SUITABLE FOR ELECTRIC / POWERED WHEELCHAIRS OR SCOOTERS.
- 03 SUITABLE FOR ABLE-BODIED CHILDREN AND ADULTS (ONE PERSON AT A TIME).
